

# FixConnect - SRS

Software Requirements Specification | Worker-Customer Marketplace

## 1. Project Overview

FixConnect is a comprehensive digital marketplace designed to bridge the gap between skilled service providers (Workers) and customers (Customers). The platform facilitates service discovery via public and private requests, ensures transparent pricing through a live invoicing system, and builds a trust-based ecosystem via identity verification, detailed profiles, and multi-criteria reviews.

## 2. User Roles & Profile Features

**Customer:** Can post service Requests (Public/Private), browse Worker Profiles, evaluate past work, accept Proposals, track live Jobs, and provide Reviews.

**Worker:** Can create professional Profiles, showcase a portfolio of past work, set availability status, browse Requests, and manage active Job invoices.

- **Unverified:** Default status upon registration; can perform tasks but lacks trust badge.
- **Verified:** Identity confirmed by Admin via official ID documents; earns "Verified Badge".
- **Availability Toggle:** Manual switch to appear "Available" or "Busy" to Customers.

**Admin:** Platform moderator responsible for document verification, user management, and resolving disputes/reports.

## 3. Functional Requirements

### 3.1 Request & Proposal System

---

- **FR1 - Public Requests (Scenario A):** Customers post a "Public Request". It becomes visible to all Workers in the Marketplace.
- **FR2 - Direct Hiring (Scenario B):** Customers browse Profiles and send a Request directly to a specific Worker or a chosen group.
- **FR3 - Privacy Toggle:** For direct Requests, Customers choose "Private" (exclusive to targets) or "Public Backup" (becomes public if targets do not respond).
- **FR4 - Proposal Submission:** Workers respond to Requests by submitting a Proposal containing *Initial Labor Cost* and *Estimated Material Cost*.
- **FR5 - Proposal Acceptance:** Upon Customer acceptance of one Proposal, the system automatically rejects all other competing Proposals for that Request.
- **FR6 - Job Creation:** A Job is officially initialized only after a Customer accepts a Proposal.

### 3.2 Job Execution & Live Invoicing

---

- **FR7 - Live Invoicing:** During an active Job, the Worker can update the invoice in real-time by adding additional services or material costs. Customers receive instant notifications of these updates.
- **FR8 - Completion Confirmation:** Jobs are closed only when the Customer clicks "Confirm Completion".
- **FR9 - Payment Handling:** Payments are settled offline (Cash) or via external methods. The system records the final amount for history and commission calculation.

### 3.3 Wallet & Monetization

---

- **FR10 - Grace Period:** New Workers receive one "Trial Job" or "Free Proposal" without needing a credit balance.
- **FR11 - Credit/Wallet System:** Workers must maintain a minimum balance to send new Proposals. A platform commission is deducted from the wallet upon each Job completion.

### 3.4 Trust & Safety

---

- **FR12 - Review System:** Customers provide a rating and written feedback post-completion. These are displayed on the Worker's public Profile.
- **FR13 - Portfolio Management:** Workers can upload images and descriptions of past work to their Profile.
- **FR14 - Reporting System:** Both parties can report misconduct; Admins can suspend/delete accounts based on these logs.

## 4. Use Case Specifications

### UC01: Direct Hiring with Privacy Toggle

**Flow:** Customer browses Workers → Selects "Verified" Worker → Sends Private Request → Worker receives Notification → Worker Submits Proposal → Customer Accepts → Job Starts.

### UC02: Live Invoice Update

**Flow:** Worker starts Job → Discovers extra repairs needed → Adds cost to "Live Invoice" → Customer sees updated total → Job completes → Final payment matched against Live Invoice.
